Conservatory and sunrooms are a fantastic feature for homes and businesses, however even the best designed sunroom will require a sun control system, in order to provide the space with privacy and control heat gain. Conservatory and sunrooms have a range of interior blinds and exterior awnings to control heat transfer from direct sunlight as well as privacy for the space.

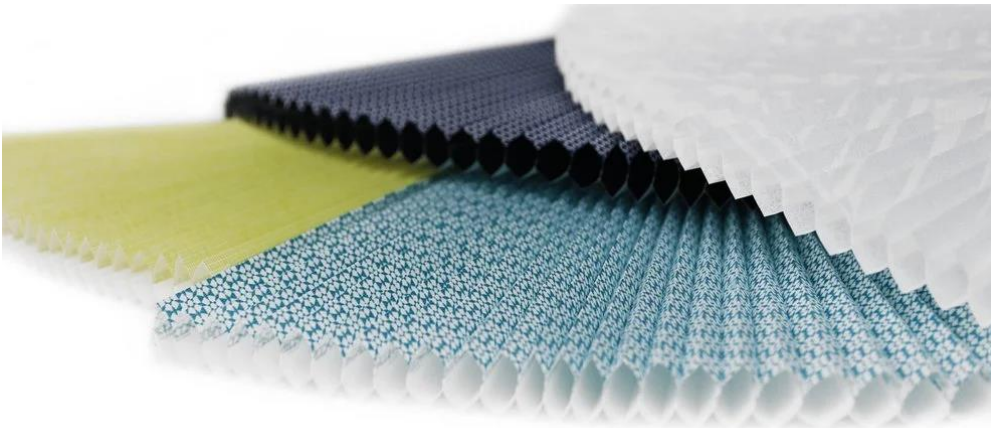

Interior Solutions

Interior Blinds are available in a number of different fabric types and styles, providing you with excellent design flexibility. Pleated and Honeycomb Blinds are most commonly used on the interior of conservatory and sunroom systems. These types of blinds are compatible with both vertical and overhead glazing, fitting tight against the glass to add an additional layer of insulation to the area.

Features

- Ideal solution for conservatories and glass roofs
- Secure length up to 4 meters using specially coated wires
- Decorative with privacy shield and glare protection
- Energy Saving through improved thermal performance due to cell design
- High quality made in Germany
- Over 100 fabrics and colours to suit your home style
- Profiles available in white, silver anodised, brass anodised, anthracite and dark brown
- Handles, clamping shoes and end caps are colour matched to the profile colours

Operation

1. Manually operated using operating rod for out of reach areas
2. Crank style with manual crank or electric crank
3. Full automated operation, equipped with motor and controlled (wall switch)

Exterior Solutions

External sun-controlled systems are available. These systems are specially designed for conservatory and sunroom systems, seamlessly covering both the overhead and the vertical glazing in one continuous system.

For the vertical areas external shutters, venetian blinds and fabric awnings can be integrated in a variety of different finishes and styles to suit your project.

External awning solutions are operated using a hard-wired wall switch. Multiple awnings can be programmed for a single switch to operate. These systems also come with wind and sun sensors to ensure that the system can operate to protect the awning and the internal temperature, even when you are not occupying the space.

Vertical Exterior Blinds

- Suitable for windows, glass facades and conservatories
- Efficient privacy shield, sun and glare protection
- Outstanding indoor temperature regulation and improved energy efficiency
- Motor drive included as standard (wired switch)
- Powder coating of cassette and rails
- Various cassette sizes for seamless integration
- Multiple fabric finishes and styles
- Option for Zip Screen fabric for greater fabric tension and wind stability

Conservatory Awning

- Designed specifically for glass roof installation
- Outstanding indoor temperature regulation and improved energy efficiency
- Motor drive included as standard (wired switch)
- Powder coating of cassette and rails
- Various cassette sizes for seamless integration
- Multiple fabric finishes and styles
- Large dimensions possible
